

QWEN.md – HelixQA LLMOrchestrator

Field	Value
Revision	1
Created	2026-05-23
Last modified	2026-05-23
Status	active
Status summary	Created per Phase 39.IT (User mandate 2026-05-23) – propagation of QWEN.md across the consumer fleet, mirroring CLAUDE.md + AGENTS.md per Â§11.4.35 canonical-root inheritance.
Issues	none
Continuation	–

INHERITED FROM constitution/QWEN.md

All rules in `constitution/QWEN.md` (and the `constitution/Constitution.md` it references) apply unconditionally. This module’s rules below extend them – they do NOT weaken any universal clause. When this file disagrees with the constitution submodule, the constitution wins. Locate the constitution submodule from any arbitrary nested depth using its `find_constitution.sh` helper.

The universal anti-bluff covenant (Â§11.4), no-guessing mandate (Â§11.4.6), credentials-handling mandate (Â§11.4.10), host-session safety (Â§12 + Â§12.6 + Â§12.10), and data safety (Â§9) all live in `constitution/Constitution.md`. Read it before working on any non-trivial change.

@constitution/QWEN.md

Canonical reference: <https://github.com/HelixDevelopment/HelixConstitution>

How this file relates to CLAUDE.md + AGENTS.md

Per Â§11.4.35 canonical-root inheritance clarity:

- `constitution/QWEN.md` is the universal canonical root for the Qwen Code CLI.
- This file is the consumer-side extension for this submodule, carrying only the inheritance pointer + the Â§11.4 covenant anchors + a brief module summary.
- The full module ruleset lives in this submodule’s sibling `CLAUDE.md`. Qwen Code agents MUST read `CLAUDE.md` before performing any work; this `QWEN.md` is the Qwen-specific entry point that ensures Qwen reads the inheritance pointer + anti-bluff covenant on every session.

Module summary

Orchestration layer for HelixQA’s multi-LLM workflows. Coordinates LLMProvider instances, executes Challenge dispatch, and produces structured QA verdicts.

For full module context (build steps, integration points, host-session safety, submodule-specific commit/push discipline) read this directory's CLAUDE .md and AGENTS .md.

Companion documents

File	Role
CLAUDE .md	Full module ruleset (Claude Code primary context)
AGENTS .md	Cross-agent mirror (OpenCode, Cursor, Aider, generic AI tooling)
QWEN .md (this file)	Qwen Code CLI entry point
../../../../constitution/ Constitution.md	Universal canonical rules
../../../../constitution/QWEN.md	Universal Qwen entry point
